React.js

Projects : I have worked on one of the react js project at my previous organization and it still under development phase. I have hands-on experience of 1.2 years.

Personal Project : I have designed and developed a fully functional e-commerce web application using **React.js**, showcasing expertise in component-based architecture and UI/UX design.

<https://samiulla-khan.github.io/mm-store/>

- Developed and maintained responsive web applications using React.js, implementing dynamic user interfaces with JSX and component-based architecture.
- Built and integrated CRUD operations, including features such as data management, and form handling.
- Utilized React Hooks (useState, useEffect, useContext, useRef, useMemo, useReducer) to manage state and lifecycle methods for improved performance and simplicity.
- Worked with functional components and implemented advanced React patterns, such as custom hooks and context API, to improve code reusability and maintainability.
- Applied state management principles, handling both local and global states in the app efficiently.
- Integrated RESTful APIs to retrieve and update data, ensuring smooth communication between frontend and backend.
- Collaborated in agile development processes to meet project milestones and deadlines.
